

EAA Compliance Audit

European Accessibility Act -- WCAG 2.1 AA

Scanned URL: <https://www.instagram.com/>

Report generated: August 23, 2026

Reference: EAA / WCAG 2.1 AA (subset -- 10 rule checks)

83 / 100

Grade B

Errors: 1 | Warnings: 1 | Notices: 0 | Images checked: 2 | Tables: 0 | Forms: 0

Confidential -- for internal compliance documentation purposes

Executive Summary

This compliance audit evaluates the page at <https://www.instagram.com/> against a subset of WCAG 2.1 AA success criteria relevant to the European Accessibility Act (EAA). The assessment covers document structure, image accessibility, form labeling, keyboard navigation indicators, and ARIA usage.

Overall score: 83/100 (Grade B). The scanned page is partially compliant. Several issues need attention to meet EAA requirements.

Breakdown:

- 1 error(s) -- must fix (affect barrier-free access)
- 1 warning(s) -- should fix (reduce usability barriers)
- 0 notice(s) -- consider fixing (best practices)
- 2 images checked
- 0 tables, 0 form(s) evaluated

Detailed Findings

ERROR

IMG_ALT

2 image(s) missing alt text

Example: `...`

Example: `...`

WARNING

HEADING_H1

no <h1> found on the page

ERROR

Must fix -- fails legal requirement

WARNING

Should fix -- reduces usability barrier

NOTICE

Consider fixing -- best practice improvement

Recommendations

Priority 1 -- Must Fix (EAA compliance risk)

The following issues represent clear compliance gaps under the European Accessibility Act. Address these first:

- IMG_ALT: 2 image(s) missing alt text

Priority 2 -- Should Fix (usability & best practice)

- HEADING_H1: no <h1> found on the page

Note: This audit covers a subset of WCAG 2.1 AA criteria relevant to EAA compliance. A full conformance audit may require manual testing with assistive technologies (screen readers, keyboard-only navigation, magnification tools).

Methodology & Scope

Audit performed: August 23, 2026

Standard checked: EAA / WCAG 2.1 AA (subset)

Tool: EAA Compliance Scanner v1.0

Method: Automated static HTML analysis of the page content retrieved via HTTP(S) GET request.

Criteria checked:

1. Images -- alt text presence (WCAG 1.1.1 Non-text Content)
2. Form inputs -- associated labels (WCAG 1.3.1 Info and Relationships)
3. Buttons/links -- accessible name present (WCAG 4.1.2 Name, Role, Value)
4. Document title -- non-empty <title> (WCAG 2.4.2 Page Titled)
5. Language -- <html lang> attribute (WCAG 3.1.1 Language of Page)
6. Viewport -- meta viewport for responsive zoom (WCAG 1.4.4 Resize text)
7. Heading structure -- h1 presence, no level skips (WCAG 1.3.1, 2.4.6)
8. iFrames -- title attributes (WCAG 2.4.1 Bypass Blocks)
9. Tables -- header cells (<th>) for data tables (WCAG 1.3.1)
10. ARIA -- aria-hidden on focusable elements (WCAG 4.1.2)
11. Fixed px font sizes (WCAG 1.4.4 Resize text -- advisory)

Limitations:

- Automated checks cannot detect all accessibility issues. Manual review required.
- Color contrast ratios require pixel-level analysis not performed here.
- Screen reader behavior, keyboard navigation flow, and focus order are not evaluated.
- Dynamic/JavaScript-rendered content is analyzed in its initial HTML state only.
